

## DESCRIPTION

This Agent Procedure streamlines gathering the hardware hash information from the endpoints. The procedure collects the information presented in the Mobile Device Management (MDM) CIM namespace and uploads it to the endpoint's designated path on the VSA Server using the **getFile()** function. Additionally, the procedure sends the gathered information to the e-mail recipients specified in the EmailRecipients variable.

## INSTALL INSTRUCTIONS

1. Import the Agent Procedure XML into the agent procedure module: <https://helpdesk.kaseya.com/hc/en-gb/articles/229012068>.
2. Assign the desired email addresses to the procedure's EmailRecipients variable.
3. Run the procedure on the target machine(s). Make sure the target machine is online and the agent is properly installed.
4. After execution, review the procedure logs for any relevant information or errors. The logs will provide details on the procedure's execution and any issues encountered.
